Day 5

Forms and Input

Key Form Elements

- **<form>**: Container for all form elements. Specifies where and how to send form data.
- **<input>**: Creates various input fields (e.g., text, password, checkbox).
- **<label>**: Provides labels for inputs, improving accessibility.
- **<textarea>**: Multi-line text input.
- **<button>**: Creates clickable buttons, usually for form submission.
- **<select> and <option>**: Create a drop-down list for selecting options.

Practical exercise: Creating a form with various input types.
